

ALUMINUM DOCKPLATES

Skid resistant safety tread deck. Bevelled edges allow smooth access from either end. Bend at upper end permits both ends of plate to lie flat. Steel legs fit between dock and truck - prevent movement when in use. High tensile aluminum alloy construction, no welds to break.

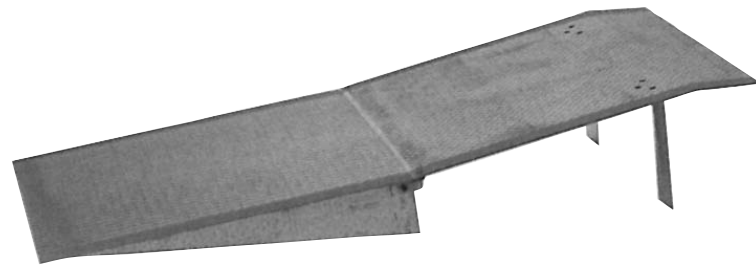

How to order:

1. Select dockplate width; add 12" to width of equipment to be used on dockplate.
2. Determine height differential; (the vertical distance from dock floor to truck floor) The height differential decides the necessary plate length.
3. Select the necessary capacity.

Dockramp Combination

For height differential exceeding 11", use ramp in combination with dockplate (above).

1. Choose a ramp which, when combined with dockplate, will provide the required height difference.
2. For maximum versatility, be sure that ramp is shorter than, or equal to, the length of the dockplate.
