

CARGO MATTING

Transmat® Anti-Slip Rebonded Rubber Matting

Eliminate the high costs of traditional bracing in trailers and rail cars with anti-slip rubber matting. This simple-to-use solution prevents products from shifting during transit. This versatile product can be used to secure paper rolls, barrels, pallets, metals and many other loads during shipping. Significant labour savings are realized by switching to this product from traditional bracing methods. Also, damage to your product during transit is minimized.

On site support is available to ensure that your loading pattern meets railway and transport regulations.

Advantages

- Approved by the Association of American Railroads
- Eliminates nail holes in trailer floors and nail damage to your product
- Cuts down on claim costs
- Reduces loading and unloading time by at least 50%
- Safely used by employees, no risk of injury from nailing
- Perforated to desired length for easy dispensing or supplied in sheeted form.

CARGO RESTRAINTS

Protect your cargo with TY-GARD 2000®

TY-GARD 2000® protects your product while reducing the material and labour cost involved in securing your shipment. D.O.T statistics show that 40% of product release incidents are the direct result of inadequate loading, blocking and bracing. A product release could result in heavy fines or personal injury to freight handlers with attendant liability. Don't become a statistic, secure your shipments with TY-GARD®. TY-GARD® is installed using an aggressive adhesive system. No nailing, bolting or sawing is required. For the past twenty-five years, TY-GARD® has been one of the most widely used cargo restraint systems in the world.

**Tested and approved by the
Association of American Railroads.
